COVID-19 Report

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus. Most people who fall sick with COVID-19 will experience mild to moderate symptoms and recover without special treatment.

How It Spreads

The virus that causes COVID-19 is mainly transmitted through droplets generated when an infected person coughs, sneezes, or exhales. These droplets are too heavy to hang in the air, and quickly fall on floors or surfaces.

You can be infected by breathing in the virus if you are within close proximity of someone who has COVID-19, or by touching a contaminated surface and then your eyes, nose or mouth.

India under COVID-19 lockdown

Government of India is taking all necessary steps to ensure that we are prepared well to face the challenge and threat posed by the growing pandemic of COVID-19 the Corona Virus. With active support of the people of India, we have been able to contain the spread of the Virus in our country. The most important factor in preventing the spread of the Virus locally is to empower the citizens with the right information and taking precautions as per the advisories being issued by Ministry of Health & Family Welfare.

Latest Lockdown Details

Union Ministry of Home Affairs (MHA) issued new guidelines to fight COVID-19 and for phased re-opening of areas outside the Containment Zones. The guidelines would come into effect from June 1, 2020 and would be effective till June 30, 2020. The current phase of re-opening, unlock 1, will have an economic focus. The new guidelines have been issued based on extensive consultations held with States and UTs.

A strict lockdown was imposed throughout the country since March 24, 2020. All activities were prohibited except essential activities. Subsequently, in a graded manner and keeping the overarching objective of containing the spread of COVID-19 in view, the lockdown measures have been relaxed.

Salient features of the new guidelines

Lockdown measures would continue to be implemented strictly in the containment zones. These will be demarcated by the State/ UT Governments, after taking into consideration the guidelines issued by the Health Ministry. Within the containment zones, strict perimeter control shall be maintained and only essential activities allowed.

COVID-19 Unlock-1 phase

Religious places, restaurants and malls have resumed operations from June 8 under the first phase of India's graded reopening of various sectors, termed 'Unlock 1'.

The guidelines to be followed in all the establishments include using masks or face covers, staggering of visitors, maintaining hand hygiene, adequate social distancing, respiratory etiquettes and thermal screening of all entrants and staff.

It also includes measures like allowing only asymptomatic staff, guests and customers inside the premises, proper crowd management, prohibiting large gatherings and maintaining effective and frequent sanitation within the premises with particular focus on lavatories, drinking and hand washing stations or areas.

In view of the potential threat of spread of infection, as far as feasible recorded devotional music or songs should be played and choir or singing groups should not be allowed, the ministry said.

According to the guidelines released for restaurants, the ministry has curtailed the seating capacity to 50 per cent and has recommended use of disposable menus and disposable paper napkins instead of cloth napkins. Staff for takeaway should be screened thermally and precautions should be taken while handling supplies/inventories, it stated. The ministry stressed on encouraging contact-less mode of ordering and digital payments.

As for hotels, room service should be encouraged, instead of dine-in, luggage should be disinfected before sending them to rooms and communication between guests and in-house staff should be through intercom or mobile phone.

Besides, all the establishments including offices, shopping malls and restaurants should be cleaned and regularly disinfected using 1 per cent sodium hypochlorite. Restricted number of people to be allowed in elevators and use of escalators with one person on alternate steps should be followed.

For air-conditioning and ventilation, the ministry said the temperature setting of all air conditioning devices should be in the range of 24-30 degrees Celsius, relative humidity should be in the range of 40-70 per cent and intake of fresh air should be as much as possible and cross ventilation should be adequate.

As per the guidelines specific to offices, an entire office building need not be closed if one or two cases of COVID-19 are reported and the work can be resumed after disinfection.

However, if there is a larger outbreak, the entire building will have to be closed for 48 hours and all the staff will work from home, till the building is adequately disinfected and is declared fit for re-occupation. The ministry's guidelines advised all those who are at higher risk like elderly employees, pregnant employees and those having underlying medical conditions and comorbidities such as hypertension, diabetes, etc.
